About Stride AI

Stride AI builds intelligent systems that:

- Understand natural language
- Retrieve contextual knowledge
- Execute real-time actions
- Automate workflows
- Enterprise-scale performance

STRIDE AI

About Stride AI

We build intelligent systems that **understand** natural language, **retrieve** contextual knowledge, and **execute** real-time actions.

Our Vision

To put agentic intelligence into every business workflow, transforming static data into dynamic action.

Key Differentiators

- Real-time Actions
- Enterprise Scale
- Secure Integrations
- Modular Design

STRIDE AI

ECOSYSTEM

Our Product Suite

Five modular, enterprise-ready AI systems designed to automate and augment complex business workflows.

Voice Agents

Real-time conversational voice AI that listens, understands, and responds with human-like latency under 500ms.

Conversational AI

Smart chatbots grounded in your data that execute actions and resolve support tickets autonomously.

Talk2SQL

Natural language interface for databases, enabling non-technical users to query data and generate visualizations.

Competition Analyst

24/7 competitive intelligence monitoring that turns market signals into strategic insights and summaries.

Agentic AI Automation

Self-directed AI agents that orchestrate complex multi-step workflows across various enterprise tools.

STRIDE AI

SHARED ARCHITECTURE

Core AI Capabilities

A unified intelligence layer powering every product in the Stride AI suite, ensuring consistency, scalability, and security.

Knowledge Ingestion & Embedding

Seamlessly ingest unstructured data from documents, PDFs, and web sources, converting them into high-fidelity vector embeddings.

Vector Search & Retrieval

Advanced semantic search infrastructure that retrieves the most relevant context instantly to ground every AI response in truth.

LLM Reasoning with Memory

State-of-the-art language models equipped with long-term memory to maintain coherence across complex decision-making tasks.

Real-time Tool Calling

Agents can dynamically invoke external APIs, CRMs, and software tools to execute actions, not just provide answers.

Multi-turn Contextual Understanding

Sophisticated dialogue management that handles interruptions, topic changes, and nuanced intent over long conversations.

Secure Integrations

Enterprise-grade security framework ensuring data privacy, role-based access control, and compliant system connectivity.

— PRODUCT 01

Voice Agents

OVERVIEW

> "A single AI voice agent that **listens, understands, acts, and responds**—at infinite scale."

Low Latency
Under 500ms response time for natural, human-like flow.

Multilingual Support
Seamless conversation in over 30 global languages.

WebRTC & Telephony
Native integration with VoIP and browser-based calling.

Real-time Actions
Invokes business tools and APIs during the call.

Barge-in Handling
Intelligently handles interruptions and pauses naturally.

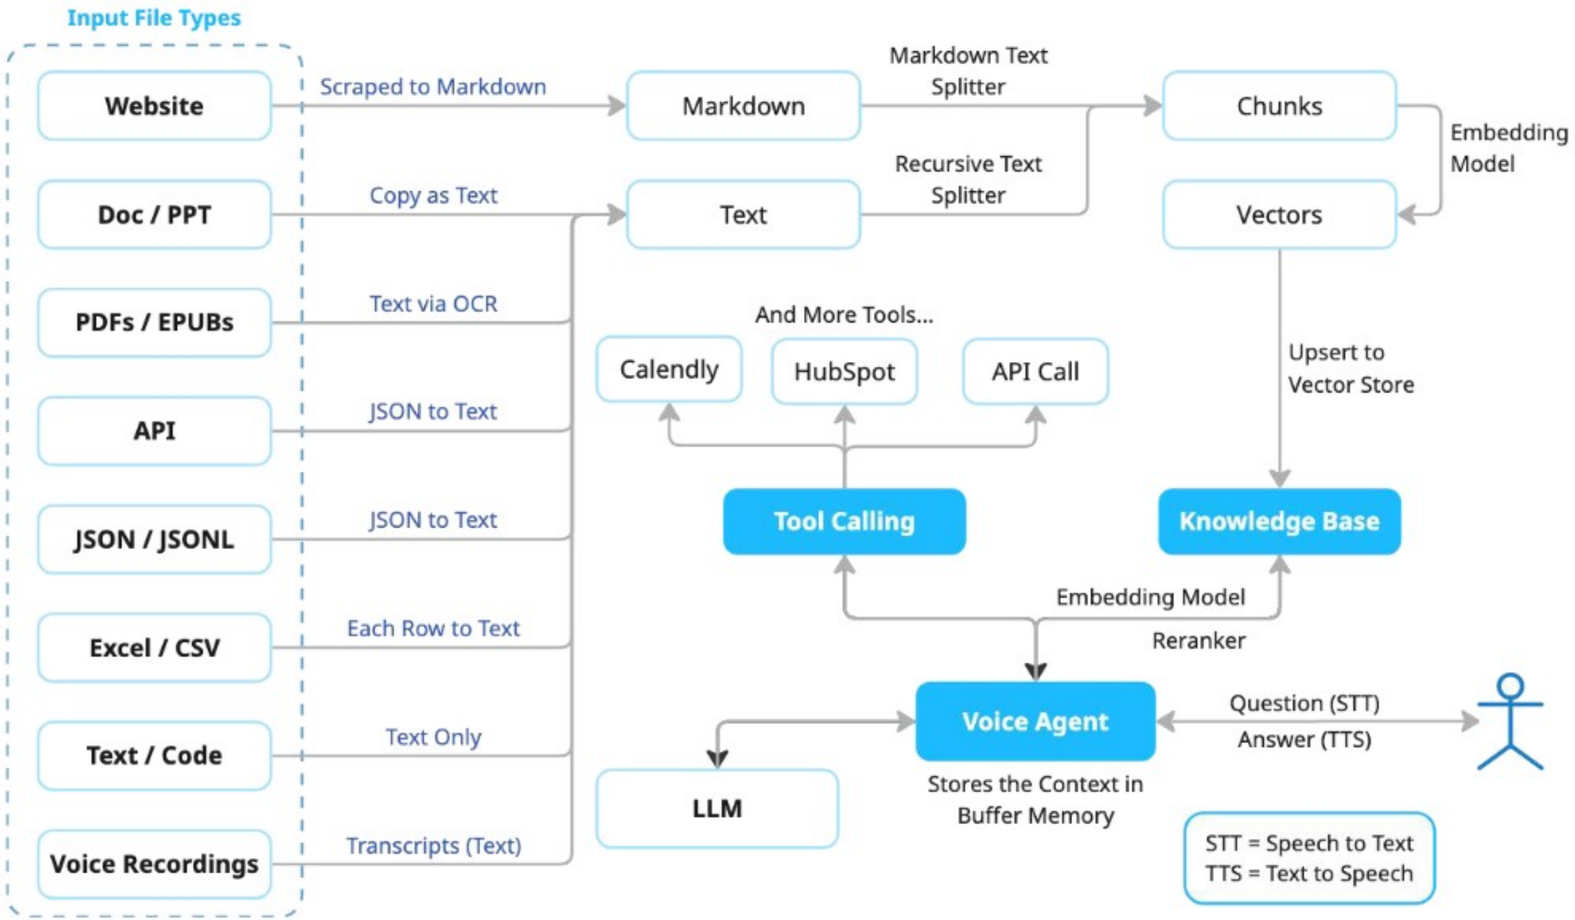
Inbound & Outbound
Scales for support lines or proactive outreach campaigns.

© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Voice Agents – Architecture

End-to-end low latency processing pipeline



© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Voice Agents – Use Cases

Deploy autonomous voice intelligence across the entire customer lifecycle, from initial outreach to support and operations.

Inbound Call Handling

Automate tier-1 support, FAQs, and routing with zero wait times. Handle spikes in volume without adding headcount.

SUPPORT

Outbound Lead Qualification

Engage cold leads instantly, qualify interest based on criteria, and book meetings directly into sales calendars.

SALES DEV

Sales Conversations

Drive revenue with persuasive, context-aware product discussions, objection handling, and order processing.

REVENUE

Customer Engagement

Proactive check-ins, renewal reminders, appointment confirmations, and satisfaction surveys at scale.

RETENTION

Operational Support

Internal helpdesk automation, shift scheduling, field worker coordination, and IT incident reporting.

OPERATIONS

— PRODUCT 02

Conversational AI Agents

Can I book a demo for Tuesday?

Checking availability...

I have a slot at 2 PM. Shall I book it?

OVERVIEW

> "A smart chatbot that **understands context, retrieves knowledge, and takes action** in real time."

Low Latency
Under 200ms response time for instant engagement.

Context Aware
Remembers history for natural multi-turn conversations.

Smart Scheduling
Books demos and meetings directly within the chat.

CRM Integration
Captures leads and updates CRM records in real-time.

Workflow Triggers
Creates support tickets and executes custom workflows.

Omni-channel
Deploys seamlessly on web, mobile, and internal apps.

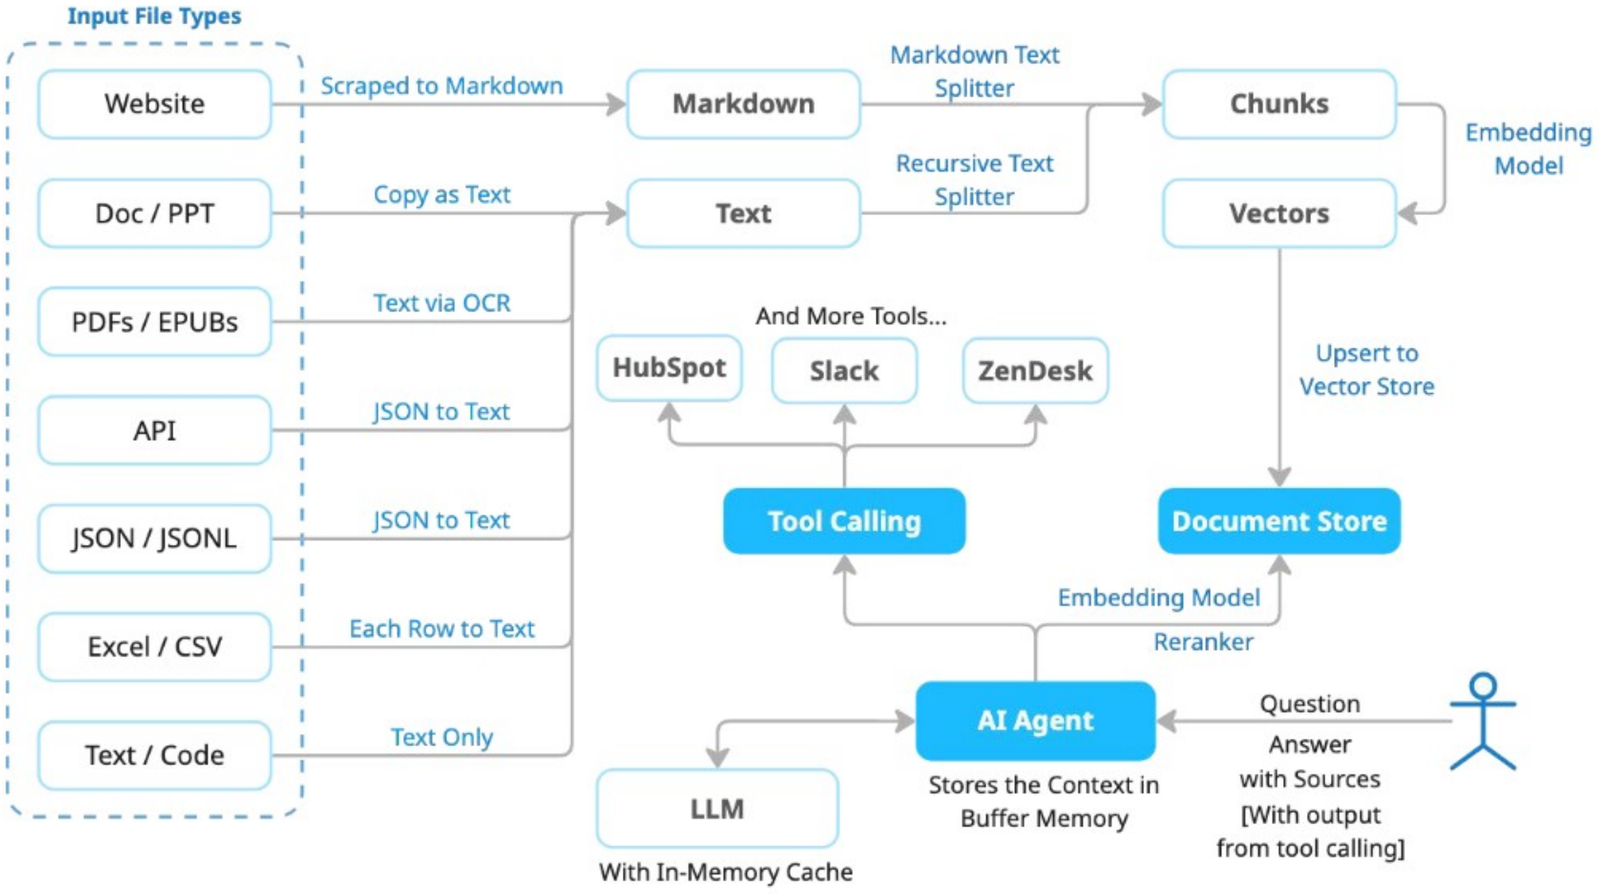
STRIDE AI

Conversational AI – Architecture

Context-aware RAG & Action Pipeline



© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Conversational AI – Use Cases

Within chat, it can

Book demos

Automatically schedules product demo sessions based on user availability and business rules.

SUPPORT

Schedule meetings

Coordinates calendars and confirms appointments without manual back-and-forth.

SALES DEV

Create support tickets

Instantly logs user issues into helpdesk systems with relevant details captured from the conversation.

REVENUE

Capture leads

Collects and stores prospect information directly into CRM or sales systems.

RETENTION

Update CRM records

Modifies customer data, status, or activity logs in real time during the conversation.

RETENTION

Trigger workflows

Initiates predefined business processes such as approvals, notifications, or follow-up actions.

OPERATIONS

— PRODUCT 03

Talk2SQL

QUERY GENERATION

OVERVIEW

> "Get data insights **without writing a single query**."

Natural Language to SQL
Translates plain English questions into optimized SQL queries instantly.

Multi-database Support
Connects seamlessly with BigQuery, Postgres, MySQL, and Oracle.

Read-only Secure Access
Ensures data safety with strict read-only permissions and governance.

Conversational Refinement
Iterate on results naturally to drill down into specific data points.

Auto-generated Charts
Instantly visualizes query results into interactive dashboards.

Get Customizable Dashboards
Any SQL query can be transformed into a fully customizable dashboard.

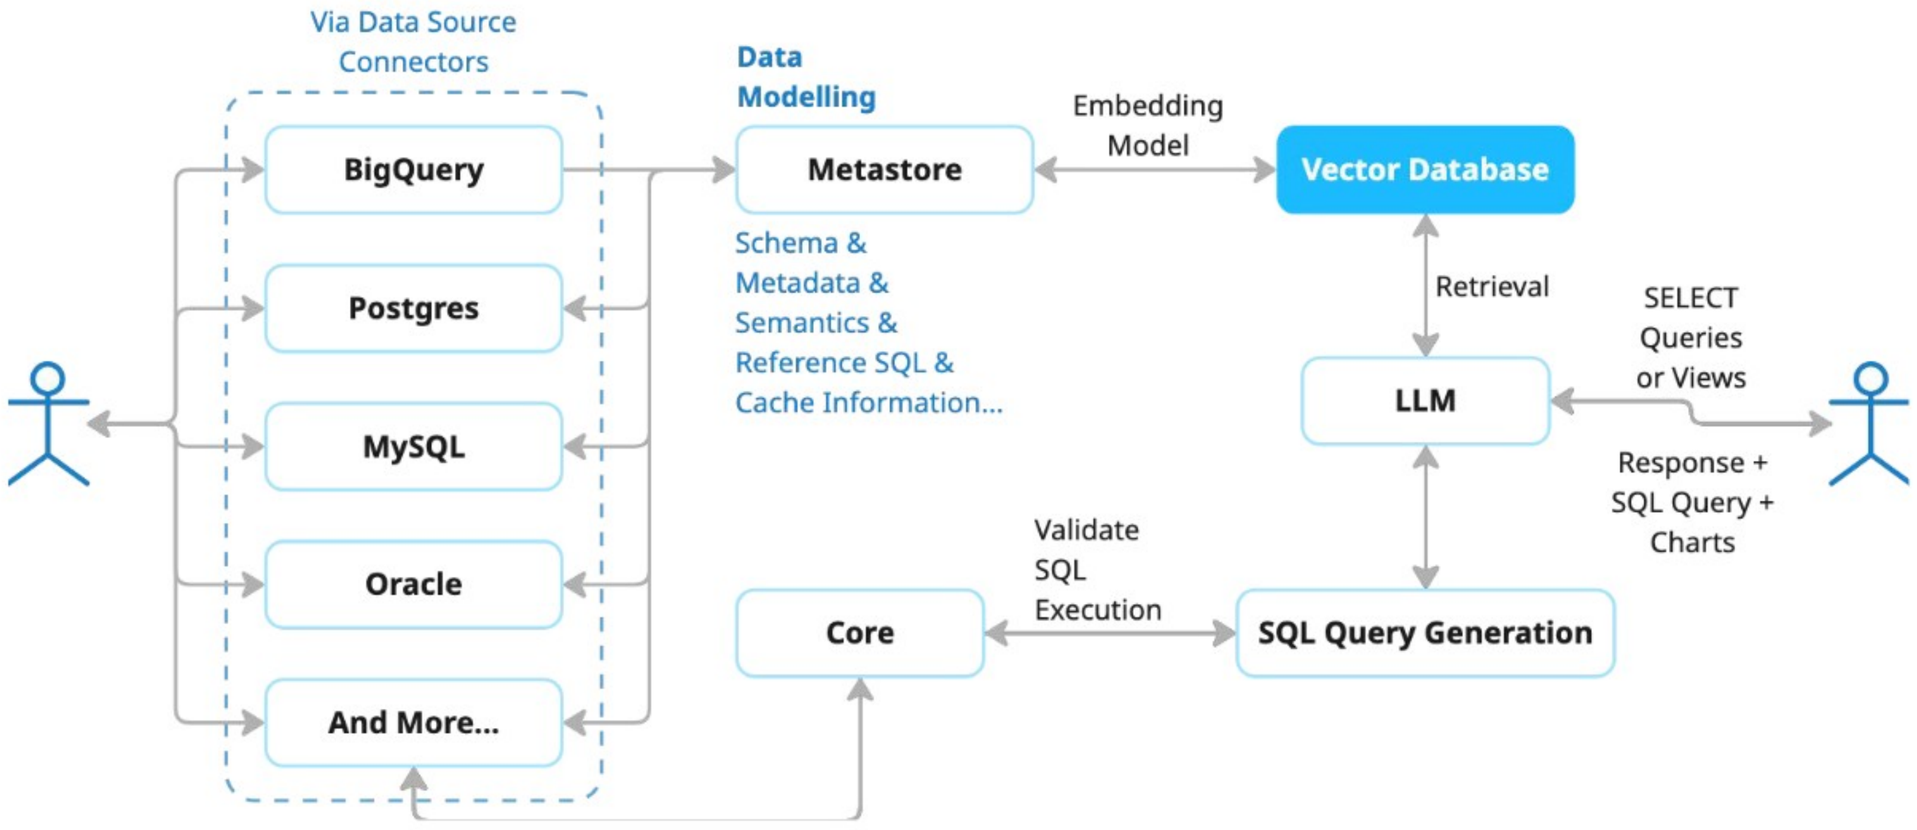
Talk2SQL - Architecture



© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Talk2SQL – Use Cases

Empower every team to access data instantly through natural language, eliminating bottlenecks and accelerating insights.

BI for Non-Technical Users

Enable marketing and operations teams to generate reports, filter data, and visualize trends without needing SQL knowledge.

SELF-SERVICE

Executive Reporting

Deliver instant, high-level summaries and KPI dashboards to leadership through simple conversational prompts on demand.

STRATEGY

Analyst Acceleration

Help data analysts draft complex SQL queries 10x faster, validate logic, and automate routine chart generation tasks.

PRODUCTIVITY

Ad-Hoc Data Exploration

Facilitate rapid hypothesis testing and deep dives into datasets without waiting for scheduled ETL pipelines or static dashboards.

DISCOVERY

Enterprise Democratization

Break down silos by giving every department secure, read-only access to relevant data through a unified natural language interface.

SCALE

Get Customizable Dashboards

Turn any SQL query into a powerful, interactive, and fully customizable analytics dashboard in seconds.

PRODUCTIVITY

— PRODUCT 04

Competition Analyst

LIVE SIGNALS

OVERVIEW

> "Everything your competitors do—**captured, analyzed, and turned into insight**."

Continuous Monitoring
Real-time tracking of competitor digital footprints.

Multi-source Aggregation
Combines web, news, social, and filings data.

Signal Extraction
Intelligently separates noise from strategic signals.

Pattern Detection
Identifies recurring strategies and market shifts.

Strategic Summaries
Generates structured briefs for executive decisions.

24×7 Intelligence
Always-on surveillance engine that never sleeps.

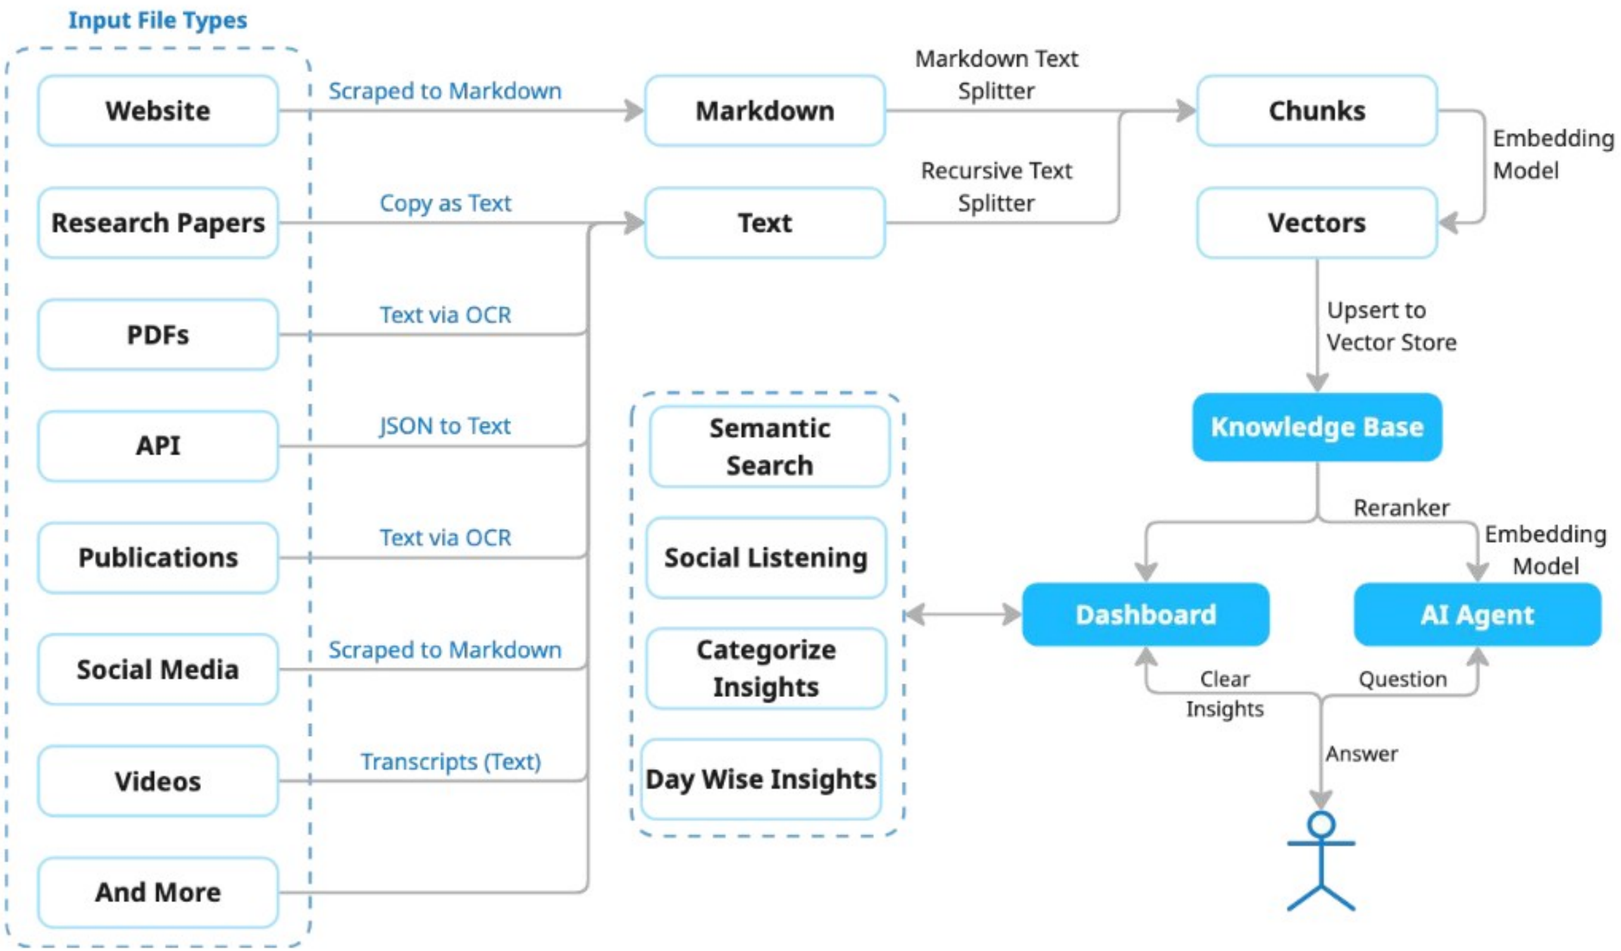
STRIDE AI

Competition Analyst - Architecture



© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Competition Analyst – Use Cases

Turn competitor moves into your strategic advantage across every department, from product roadmap to sales conversations.

Competitive Benchmarking

Compare features, pricing, and performance metrics against key rivals in real-time to identify gaps.

STRATEGY

Market & Trend Analysis

Identify emerging market shifts and customer sentiment patterns before they become mainstream.

RESEARCH

Sales Enablement

Equip sales teams with dynamic battle cards and objection handling scripts based on competitor weaknesses.

SALES

Product Strategy Planning

Prioritize roadmap features by analyzing gaps in competitor offerings and valid customer requests.

PRODUCT

Brand & Reputation

Track share of voice, sentiment, and PR crises across news, social media, and forums instantly.

MARKETING

COMPETITION ANALYST

Intelligence Modules

Six specialized analytical engines that continuously process competitive signals to deliver structured, actionable insights 24/7.

Semantic Search

Goes beyond keywords to understand the meaning and context behind competitor data, ensuring no relevant signal is missed.

Social Listening

Real-time monitoring of brand sentiment, customer feedback, and viral trends across major social platforms and forums.

Insight Categorization

Automatically tags and sorts intelligence into strategic buckets like Pricing, Product Launches, or Marketing Moves.

Day-wise Trend Analysis

Tracks competitive intensity over time to identify specific campaign launch dates and shift in strategic focus day-by-day.

Cross-source Correlation

Connects dots between disparate data points —like news, job postings, and website changes—to reveal hidden patterns.

Interactive Dashboard

Delivers findings via a structured, interactive interface allowing drill-down into specific competitors or timeframes.

Agentic AI Automation

AGENT
ACTIVITY

OVERVIEW

> "AI agents that go beyond automation—intelligently managing workflows."

Self-directed Execution
Autonomous task completion without constant prompts.

Context-aware Decision Layer
Understands nuance and business logic before acting.

Dynamic Action Selection
Chooses the right tool for the job in real-time.

Multi-system Orchestration
Connects disparate apps and systems seamlessly.

Human-in-the-loop Support
Seamlessly hands off to humans for complex approvals.

Goal-Oriented Planning
Breaks down high-level objectives into executable steps.

© 2026 InfoStride Technologies Pvt. Ltd.

Agentic AI Automation – How It Works

Autonomous workflow orchestration that moves beyond simple triggers to intelligent planning and execution.

STEP 01

Trigger

Workflow initiates via event, schedule, API webhook, or user action.

Email | Slack | Cron

STEP 02

AI Planning

Agent analyzes context, determines intent, and formulates an execution plan.

Reasoning | Memory

STEP 03

Invokes Tools

Selects and authenticates with necessary external tools and platforms.

Zapier | n8n | Rest API

STEP 04

Executes Tasks

Performs actions: updates CRM, sends approvals, moves data, notifies users.

Update | Create | Send

STEP 05

Monitors & Adapts

Validates outcome, handles errors, and learns for future optimization.

Validate | Retry | Log

© 2026 InfoStride Technologies Pvt. Ltd.

Shared Architecture Layer

A unified, modular foundation powering the entire Stride AI ecosystem, ensuring consistency, scalability, and security across all products.

INTELLIGENCE

LLM Reasoning Engine
Centralized model routing, prompt orchestration, and decision logic.

Context Memory
Long-term state management & session recall.

Tool-Calling Framework
Standardized API execution interface.

KNOWLEDGE

Centralized Knowledge Base
Unified document store for all enterprise data.

Vector Database
High-speed semantic search & embedding retrieval.

INTEGRATION

Modular Integration Architecture
Secure connectors for Databases, APIs, ERPs, and CRMs.

© 2026 InfoStride Technologies Pvt. Ltd.

Deployment Model

Flexible adoption strategies designed for **enterprise environments** with strict security and integration requirements.

Modular Product Adoption

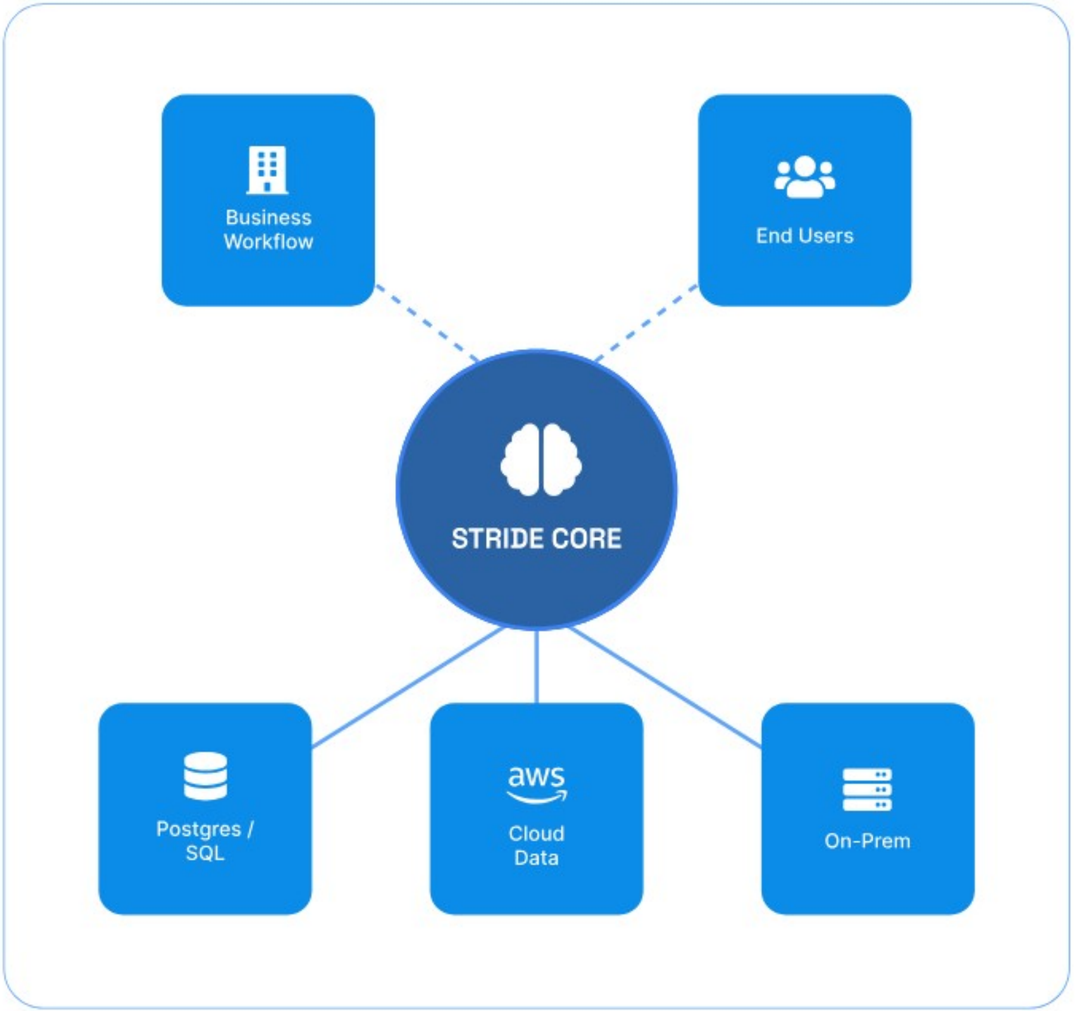
Start with a single agent or deploy the full suite. Features can be enabled incrementally as business needs evolve.

Secure Environments

Zero-risk architecture with secure read-only access connectors. Works across private clouds and on-prem databases.

Enterprise Integrations

Seamless integration with existing ERPs, CRMs, and business systems via custom APIs and webhooks.



© 2026 InfoStride Technologies Pvt. Ltd.

STRIDE AI

Business Impact

Stride AI transforms enterprise operations by delivering measurable efficiency, speed, and intelligence at scale.

Faster Response Times

Reduce customer wait times from minutes to milliseconds with always-on AI agents.

Reduced Manual Effort

Free up human teams from repetitive tasks to focus on high-value strategic work.

Enterprise Integrations

Seamlessly connect AI with your existing tools and systems.

Operational Efficiency

Lower operational costs while scaling capacity 24/7 without headcount increases.

Continuous Intelligence

Generate real-time insights from every interaction, query, and workflow execution.
